

CONTRACT SERVICES

DRAINAGE SYSTEMS

The injection system on this machine is on the oscillating cam principal. The machine is 1.5 m wide, slits are cut by a rotary decompactor, blades set at 25 cm spacings and cutting 15 mm slots at a maximum depth of 20 cm. Thus the ground is decompacted prior to the injection of drainage material, and ridging does not occur. Suitable for the application of moist sand, leica and 2-6 mm grit.

SPRAYING

Fast, efficient, safe application of the right herbicide to give at least 95% kill of all common amenity weeds – Guaranteed!

Custom built boom sprayers, ATV's, knapsack sprayers, CDA sprayers, granule applicators and mist blowers.

Pesticide Application

- Worm control
- Selective weed control
- Total weed control
- Moss control
- Disease control – with fungicides (curative or preventative)
- Growth regulator applications on grass or on tree shoots

TURF RENOVATION

Hard, compacted ground is a sure way to prevent seed germination, encourage moss and disease so good ground preparation with deep decompaction, aeration and soil exchange is the key to guaranteeing good seed germination and a strong health sward. Our experienced operators, complete with some of the very latest ideas in groundcare equipment will ensure a job well done. We can offer a full programme or just what suits you needs and your budget!

Aeration and Decompaction

- Earthquake Decompaction – the very latest in decompaction technology
- Vertidrain Aeration & Wiedenmann Terraspikes Solid Tine Aerator
- Sandmaster - Decompacting and inserting drainage material
- Hollow Coring and Collection
- Micro -Tining

TRAINING

1. ARE YOUR OPERATORS LEGAL?

It is not just the certificate of competence that make spray operatives legal:-

- Are records kept ?
- Is calibration carried out ?
- Are chemicals transported correctly ?
- Are company safety procedures followed correctly ?

These are just a few points for you to consider to determine whether or not you get what is required from your operators, or if you are giving them the facilities that the law requires.

2. TRAINING AT COMPETITIVE COSTS

Training is offered to suit your needs. Your operators may have a certificate, so you may like to consider any new legislation or just want to refresh their present knowledge. (Please remember that the introduction of C.O.S.H.H. regulations may have outdated their training). New courses for a full certificate are run as a full training programme.

All training can be delivered at the place of work. The training is offered as a single package including:-

- Training Costs
- Examination Costs
- Certificate Costs

An examiner will be arranged to visit the site during the training period, so all you have to do is call Phoenix.

3. A PACKAGE TO SUIT YOUR NEEDS

There is a range of packages available to suit clients, these range from a short half-day update on legislation to the full foundation and applicator training followed by N.T.C. tests.

4. TO ARRANGE YOUR TRAINING

Simply call Phoenix for prices and times and remember training can be carried out on your own premises. Costs are dependent on numbers taking the courses and the type of course undertaken.
