

PHOENIX FLORA MIXTURES

Phoenix Wild Flower Mixtures, suitable for amenity and conservation areas

The recreation and restoration of our countryside can only be accomplished with patience and care. Wild flower areas are becoming increasingly important towards improving our environment. It is important, therefore, that the correct mixtures are selected to enable the success of such projects.

Experienced staff are available to advise with mixture selection and assist with site management, if required.

We promise to offer sound technical and professional advice on not only the formulation, establishment and development of wild flower meadows, but eventual cost savings on the completed scheme.

Special Mixtures

As well as the mixtures shown we are always pleased to advise upon and produce mixtures to your own specifications. Please enquire.
