

## PHOENIX HYDROSEEDING PRODUCTS

Hydroseeding is a method of applying seed directly to the soil surface using water as the prime carrier and creates a temporary micro environment enhancing seed development.

### Hydroseeding Mulch

Hydroseeding Mulch comes in user friendly packaging, has a non toxic green colour added to assist in even application and allows it to blend in with the environment.

Hydroseeding Mulch's are:-

- Easy to mix
- Biodegradable
- Non Toxic
- Requires upto 30% less product than cellulose mulches
- Will not clump or crust
- High in moisture retention capability

Even after its initial work of protecting the seed, all our Mulch products continue to decompose into carbon dioxide, water and organic matter to further aid plant development.

### Blended Mulch

- 70% Wood Fibre, blended with 30% Clean Recycled Paper.
- Outperforms straight paper mulches and arguably straight wood mulches every time - this is because the combination of the varied length wood fibres and soft paper fibre produce excellent water retention qualities.
- When applied it forms a homogeneous and consistent mix with more absorption of water than a straight wood or straw mulch.
- Results in quicker and better germination with a slow release of moisture back into the soil.

## Fibre Mulch

- 100% Wood Fibre.
- Designed specifically for use in mechanically agitated equipment only and is made from whole wood fibres.
- Provides excellent water absorption and retention to sustain the seed during dry spells and will continue to do so until the sward has established enough to stabilise the soil.
- Fibre Mulch forms a homogeneous mix that decomposes naturally and so contributes nutrients back into the soil.

*100% Wood fibre Mulch*

## Pelleted Mulch

- Clean Recycled Paper and Corn Fibre.
- This new mulch has been created to dramatically reduce the amount of time required for mixing when using a jet agitated machine.
- Made from clean recycled newspaper and corn fibre and compressed into a small easy to pour pellets. The ability to pour the mulch into the tank rather than breaking up the bales by hand results in a much shorter loading and mixing time.
- Increased moisture retention offers top performance when establishing a grass cover.

## Soil Guard

- Bonded Fibre Matrix (BFM) for Erosion Control Projects.
- Unique among erosion control systems, Soil Guard delivers the performance of an erosion control blanket and is biodegradable.
- Soil Guard forms a flexible BFM mat. It is made from a blend of wood fibres a natural binding agent and organic mineral activators that once dry can be re-wet repeatedly and will hold soil and seed in place preventing erosion.
- Designed for mechanically agitated machines and suitable for every type of erosion control project.

## Enviro-Shield

- Bonded Fibre Matrix (BFM) with Gypsum for Erosion Control Projects.
- Similar to Soil Guard in performance but can be used with jet agitated machines.
- This blanket is designed to prevent both water and wind erosion, as well as enhance germination by protecting the seed until vegetation is established.
- Enviro-Shield is a unique product in that it is the only BFM on the market that includes gypsum. Gypsum supplies nutrients back into the soil in the form of calcium and sulphur and will improve the structure of heavy clay soils and buffer the soil pH.

## Hydro Fertiliser

- 18-14-20 + TE + 50% Nutralene (slow release nitrogen)
- Exclusively designed for Hydro-seeding applications this Nutralene based fertiliser will deliver immediate slow release NPK to emerging grass plants.
- Sold as a 'Single Bag System' for ease of use in the field, Hydro Fertiliser is specially designed to provide young seedlings with the necessary nutrients they require to establish strong root mass.
- Sold in single 10kg bags for use with 600 gallons of water.

## Blue Goo Tackifier

- Tackifier / Soil Binder.
- "Blue Goo" Tackifier is a high quality Polyacrylimide product specially designed to re-wet slowly to provide better moisture retention and greater longevity than other conventional tackifiers.
- A high quality, biodegradable and economic way of reducing erosion control.
- Sold in easy pour pre measured bottles (12 units).

## Hydro Biostimulant

- Liquid Plant Feed
- A unique highly concentrated liquid biostimulant formulated to enhance germination, root development and plant survival.
- Provides specific bacteria, hormones, soil microbes and nutrients required by new grass plants as they germinate and develop.
- Sold in squeezable 1kg pre measured bottles.

## Hydro Super Absorbant

- Slow Release Water Retentive Polymers.
- Add this product to your tank when extra water retentive qualities are required to aid aftercare by slowly releasing water back into the mulch.
- Help the mulch cover stay moist for longer without having to irrigate.
- Sold in 3.5kg pre measured bottles.

## HYDROSEEDING MACHINERY

Easy Lawn Inc. have been manufacturing high quality hydroturfing machines for over 15-years. Easy Lawn have listened to customers and have consistently improved their designs, keeping in mind to produce the most up to date and advanced systems in the marketplace. Easy Lawn have developed a solid reputation for delivering innovative Hydro Turfing machines that are reliable, require less maintenance and are less costly to purchase.

The jet agitation Turfmaster and Landscaper Series units both have poly tanks and Robin petrol engines whilst the mechanically agitated Contractor Series units feature stainless steel tanks and mulch grinders with John Deere diesel engines.

## TM20m

Designed specifically to be a powerful, lightweight and compact hydroseeder, this unit can be easily transported around sensitive areas and deliver excellent productivity to undertake conventional hydroseeding, slope stabilisation and erosion control projects.

## TM35

This 350 gallon unit is ideal for the landscaper who is starting out in hydroseeding. The range consists of 3 different performance packages and various options to allow the operator to spec his machine for ease of use and maximum productivity. These units are capable of applying one acre of material a day and can be used to mix heavy erosion control slurries.

## C60/C75

This is the only 600/750 gallon unit manufactured as standard at the factory to feature; a double axle surge braking trailer, Euro spec lighting, CE marks and a low tongue weight. Easy Lawn's exclusive HPV pump generates the most pressure and volume available in a unit of this size. The design philosophy behind the C60 and C75 allows you to custom build the unit to your needs by specifying a choice of diesel or petrol engines and have the ability to add options to modify the unit to your requirements.

The C60/C75 also comes standard with Easy Lawn's Total Hydraulic Control System that assures trouble free operation, fast mixing, easy clean out and virtually maintenance free performance.
