

PHOENIX FERTILISER RANGE

Phoenix Amenity Fertilisers specifically designed for use on all amenity and sports field grassed areas.

Fertilisers not only assist with the establishment of new grassed areas, but also help towards the maintenance and upkeep of established amenity turf. This fertiliser range offers a selection of fertiliser blends to aide establishment and healthy growth of our grass seed range.

PF 1 PRE SEED FERT 6 : 9 : 6

A Preseeding fertiliser for use on soils that already have reasonable Nitrogen, Phosphate and Potassium levels encouraging good root development.

PF 2 PRE SEED FERT 10 : 15 : 10

A Preseeding fertiliser particularly recommended for use on impoverished soils.

PF 3 OUTFIELD FERT 9 : 7 : 7

For established recreation areas where the application of fertiliser will maintain healthy grass cover which would otherwise be lost through lack of nutrients.

PF 4 GENERAL PURPOSE 20 : 10 : 10

For use on areas such as sports fields, landfill, coal spoil and quarry reclamation or generally where the growing medium is very low in nutrients.

PF 5 LAWN FERT 11 : 5 : 5 Spring / Summer

A well-proven outfield fertiliser for use on sports grounds and golf fairways which receive intensive use and need additional nutrients to help the turf make a full recovery. A general purpose Spring / Summer fertiliser.

PF 6 LAWN FERT

3 : 12 : 12 Autumn / Winter

A compound fertiliser containing a high percentage of phosphate and potassium which will tend to stiffen the leaf blade and encourage root growth throughout the Winter. A general purpose Autumn / Winter fertiliser.

SIERRABLEN

5 : 9 : 9 +3% MgO

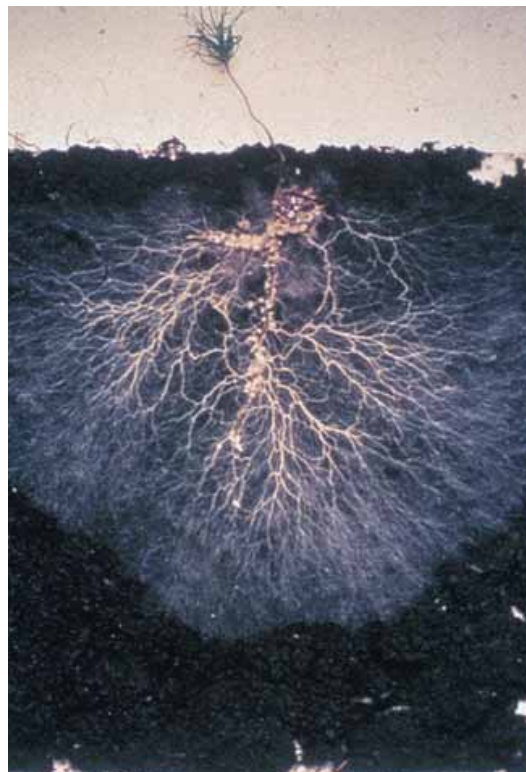

Sierrablen Flora is a controlled release fertiliser using Poly-S coatings which rely on soil temperature as their main mechanism of release. The release of nutrients is not influenced by soil moisture levels, PH levels, or bacterial activity etc. and remains consistent over a wide range of environmental conditions. Two year feed from one application.

MYCORRHIZAE PRODUCTS

Mycorrhizae products are an important tool in ensuring plant success. Mycorrhizae fungi are essential in root development, water and plant nutrient uptake and are frequently missing from new and compacted soils. Mycorrhizae physically improve soil structure around plant roots either by separating clay platelets or by clumping sand particles. They also contribute to plant health by supporting other beneficial soil organisms including nutrient fixing bacteria and help develop a resistant zone to disease around the plant roots.

These products should be used in situations where Mycorrhizae is lacking:

- Construction sites where organic matter is inadequate
- In sterile conditions and when planting out from the nursery
- During warm / dry Summers to aid uptake of water
- Beneficial during transplanting bare root stock.

LIQUID FERTILISERS

PREMIER GREEN "R" **18 : 0 : 0 + Fe + Mg + TE**

Premier Green "R" liquid gives a straight nitrogen feed with added iron magnesium and trace elements, with rapid foliar and root uptake.

PREMIER **15 : 0 : 6 + Mg + Fe + TE**

Premier 15:0:6 liquid gives nitrogen and potash feed ideal for an early season feed with added iron, magnesium and trace elements, with rapid foliar and root uptake.

PREMIER MATCHPLAY PLUS 15 : 2 : 4 + 2% SEAWEED + 1% Fe + TE

Matchplay Plus is a balanced NPK liquid fertiliser for high use fine turf areas; it contains a balance of NPK plus organic growth stimulants and a full trace element package.

NUTRISEA GOLD LIQUID SEAWEED CONCENTRATE

A liquid seaweed concentrate containing minerals, micronutrients, amino acids, vitamins and growth regulators to stimulate vigorous root development and foliar growth.

SLOW RELEASE FERTILISERS

SCOTTS MUNICIPAL **15 : 9 : 15 + Fe**

A balanced early season NPK application, including iron to assist wear tolerance that will release nutrients for up to 3 months.

SCOTTS SPORTSMASTER 26 : 5 : 11 + 2% Mg + TE

A high boost nitrogen treatment for use on: Fairways, Playing Fields and Sports Outfield areas. Phosphate and potash will encourage good root development and the magnesium will improve foliar colour. Nutrients will release for up to 3 months.

SPECIALIST FERTILISERS

TREE & SHRUB FERTILISER 4 : 19 : 10 +8% MgO

This is a compound fertiliser with a high content of slow-release soluble phosphate, plus high levels of potash and magnesium. Ideally suited for root development, which is important in the early stages of growth. It can also be used on reclamation sites or sand-based soils. Only one application in the spring season is necessary.

SCOTTS CLEANRUN PRO 10 : 2 : 4

includes: MCPA + Mecoprop-P

Weed & feed compound fertiliser for use on all amenity grass areas. The inclusion of 3 selective herbicides will control common broad leaf weeds.

SCOTTS RENOVATOR PRO 10 : 2 : 4

includes: MCPA + Mecoprop-P + 16% Fe

Weed feed & mosskiller compound fertiliser for use on amenity grass areas. The inclusion of the 3 selective herbicides will control common broad leaf weeds. In addition the iron controls the moss and will green up the turf.

ALSO AVAILABLE:

- Sulphate of Amonia
- Triple Superphosphate
- Superphosphate
- Calcified Seaweed

FERTILISER SPREADERS

A complete range of fertiliser spreaders from a small hip mounted applicator to large wheeled applicators with a 37kg hopper.

FREE SOIL SAMPLE ANALYSIS

As part of our complete service we can offer a free soil sample analysis to help determine the exact nutrient requirement of problem turf areas. Please call the sales office for more information.
